3. TAMPER DETECTION ANALYSIS

Analysis Type: timestamp_discontinuity

Severity: HIGH

Description: Critical 4 min 12 sec (252s) timestamp discontinuity identified during the intrusion window (02:43:18 to 02:47:30 UTC). 7,560 expected video frames missing with no power-down signal recorded in syslog.

Analysis Type: gop_break

Severity: HIGH

Description: GOP (Group of Pictures) boundary violation at byte offset 0x12A9E00. Sequence terminated mid-GOP on a predictive P-frame without closed IDR boundary; next frame begins with new non-sequential sequence parameter set (SPS).

Analysis Type: watermark_integrity

Severity: MEDIUM

Description: Hikvision proprietary digital watermark check failed on 14 consecutive frames following timestamp resumption. CRC32 checksum mismatch in SEI user data unaligned.

4. CHAIN OF CUSTODY LOG

The following is a hash-chained, append-only log of all actions performed on the evidence. Each entry is cryptographically linked to the previous entry using SHA-256, ensuring that no entries can be altered, removed, or inserted without detection.
